MARKETING FUNNEL & CONVERSION PERFORMANCE ANALYSIS

On: ***Bank Marketing Campaign Dataset***

By: ***Adeel Mustapha***

Tools: ***Python, Excel***

1. Introduction

In this report we analyze the bank marketing campaign dataset to see how customers progress from initial contact to successful subscription. We also evaluate conversion rates, channel effectiveness and drop off points were evaluated. The results show that phone based campaigns achieve higher conversion rates while most users exit before the final conversion stage. Optimizing early engagement and focusing on high performing channels can improve marketing ROI significantly

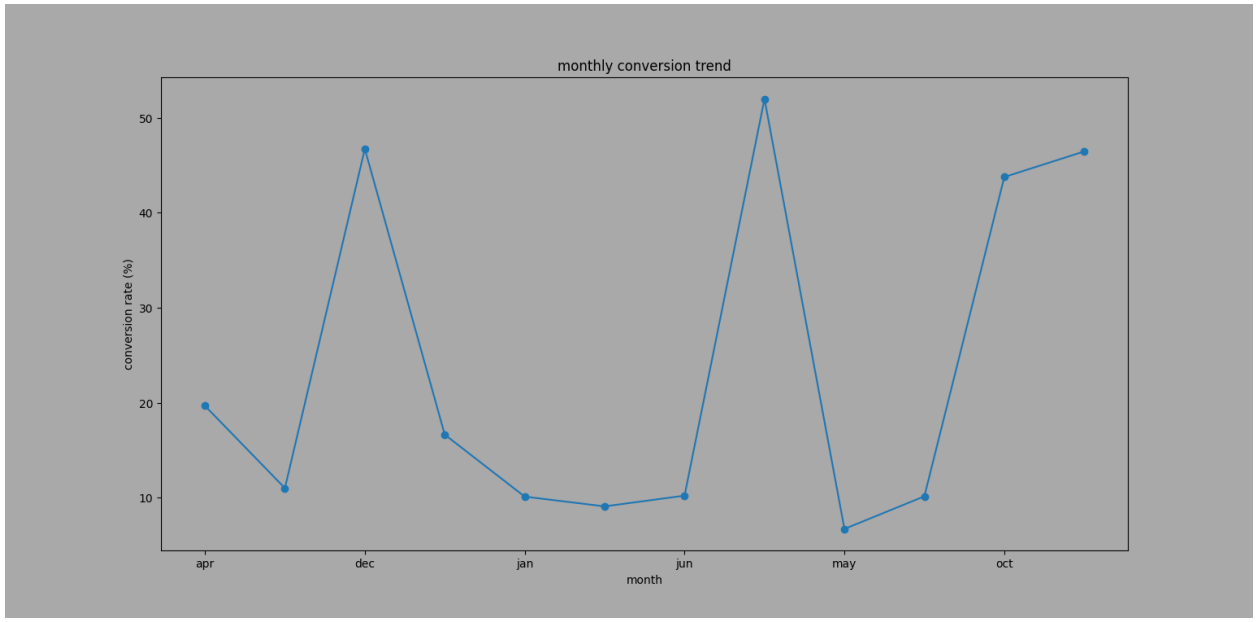
2. Funnel overview

The marketing funnel represents the progression of customers from initial contact to successful subscription. All contacted customers enter the funnel and only a portion complete the final conversion stage. The funnel visualization highlights the reduction in users between stages, revealing potential optimization opportunities

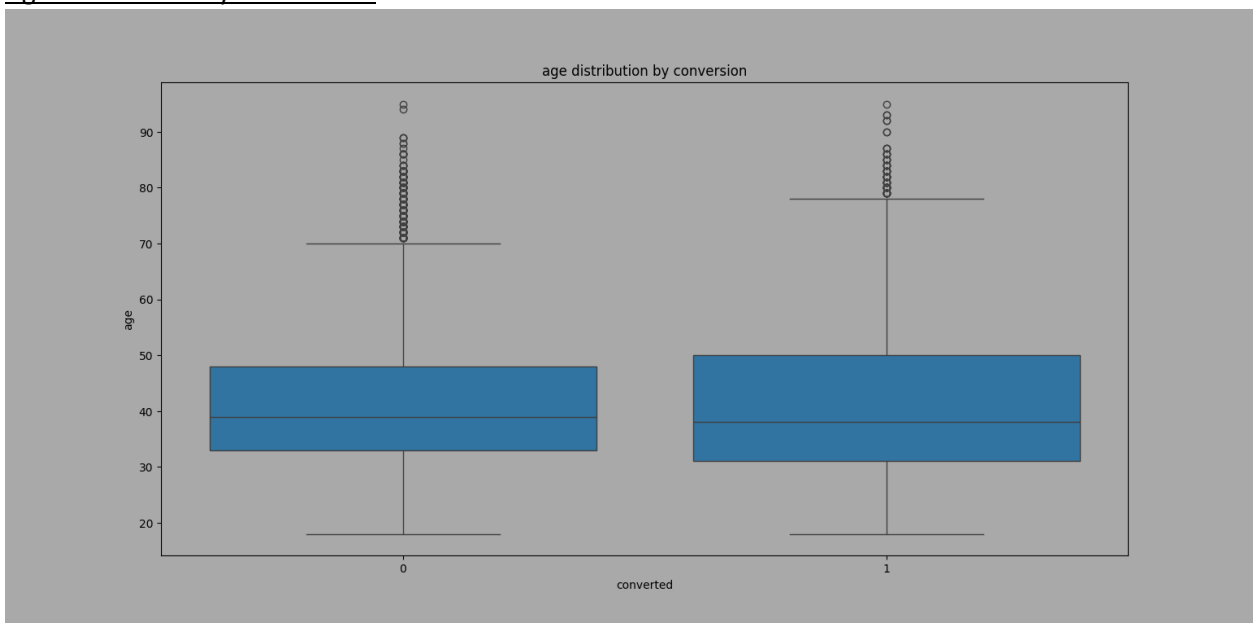
3. Conversion analysis

Conversion rate = ***11.70%***

Monthly conversion trend:

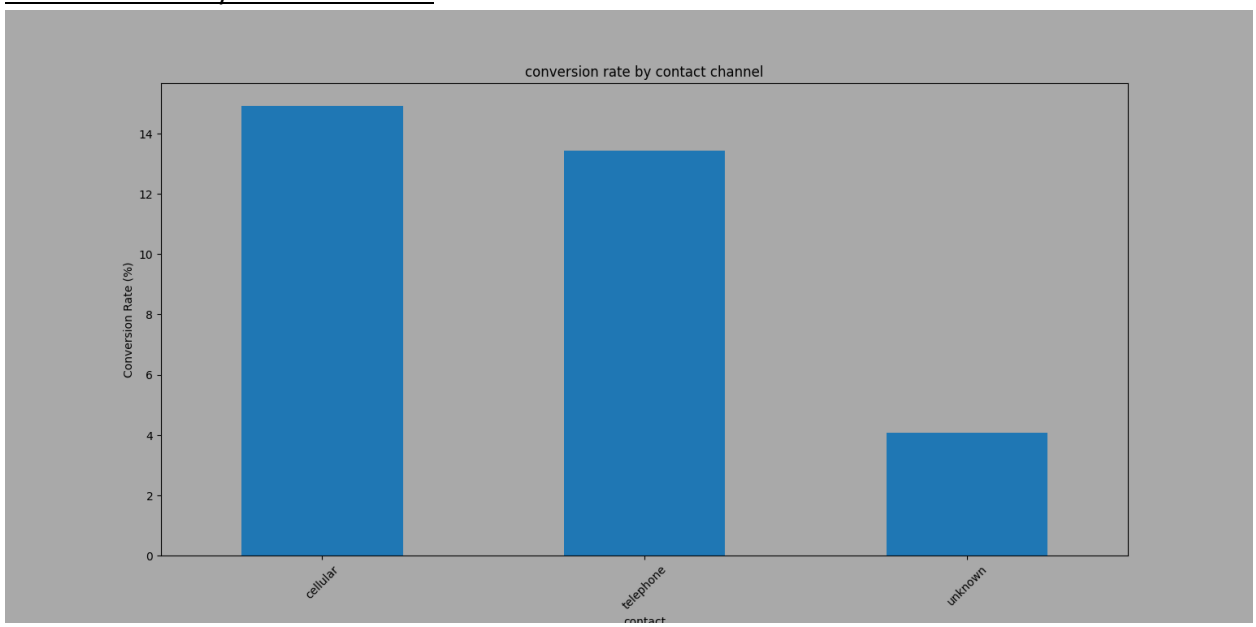


Age distribution by conversion:



The overall conversion rate measures the effectiveness of marketing campaigns in turning contacted customers into subscribers. The analysis shows that only a small percentage of individuals who were contacted converted, which indicates opportunities ton improve targeting and messaging strategies

Conversion rate by contact channel:



Conversion rate varies across communication channels, cellular phone based interactions shows higher success rates compared to alternative methods, which suggests that personalized engagement increases customer trust and response likelihood

4. **Drop off analysis**

100 – Conversion rate

= 88.30%

A significant proportion of customers exit the funnel before conversion which indicates that early stage engagement and customer qualification may require improvement. Reducing drop off at this stage could substantially increase overall conversions without increasing marketing spend

5. **Insights and recommendations**

Most customers do not show progress past initial contact, certain months produce higher conversion rates, longer engagement duration correlates with higher success, older customer segments show stronger conversion likelihood

Allocate more resources toward high performing contact channels, improve early customer engagement through personalized messaging, focus campaigns on customer segments with historically higher conversions, and follow up with previously contacted but not converted customers

6. **Conclusion**

This analysis identified key opportunities to improve marketing efficiency through channel optimization and better early stage engagement. By addressing funnel drop-offs and prioritizing effective communication methods, organizations can improve conversion rates and maximize marketing return on investment.
